

Turney *field*force

Turney demonstration units.

T6080 Power Command – 155hp with power boost to 178hp
T7050 Power Command – 197hp with power boost to 241hp
T7070 Auto Command – 224hp with power boost to 250hp

- Auto Command
- Vario transmission with 4 mechanical gears
- Multi function controller
- Electronically adjusted Sidewinder II
- IntelliView III touch screen
- ICP control panel
- Exhaust brakes

Nitro-Jet system joins Opico's distinctive stainless steel Ferti-Cast system for applying liquid or granular fertiliser to OSR in bands.

Designed to work hand-in-hand with the Variocast seeder unit, the Nitro-Jet nozzles apply a jet of nitrogen just in front of the subsoiler leg. The disturbance of the leg through the soil is enough to incorporate the nitrogen into the first inch of soil where the seed falls, giving the seed immediate contact with the nutrient.

Give us a ring for more details on how this could help establish your OSR. First unit already sold!!!

Seed Hawk direct drill – one unit already sold and plenty of interest, but is it for you? Contact Andy or Nigel at Wellingborough and find out. The machine is available in working widths of 4m, 6m and 8m, with only 150 hp required to operate the 6m model. The seed units offer extremely precise seed and fertiliser placement with excellent consolidation to aid moisture retention and exact germination.

We have the following Vaderstad machines available for demonstration.

- 3.0m Topdown
- 4.0 & 6.0m Rapid drills
- 5.0m Carrier
- 3.30m Rexius Twin

Ring us for a demo!!

Discaerator we have a 3.0m mtd machine available for demonstration. It combines two rows of large diameter discs with the low-draught design of the company's subsoiler legs.

The two rows of 500mm discs are positioned at 15 degree angles between a five or seven leg subsoiler configuration and immediately in front of the large 600 or 800mm packer roller.

Ring us for a demo of this very competitively priced machine.

The *force* in your *field*
